Maryland: No significant events at this time.
New Jersey: No significant events at this time.
New York: No significant events at this time.
Ohio: No significant events at this time.
West Virginia: No significant events at this time.

WEATHER:

24-hour Projected Weather Statewide:

National Weather Service, 5:00 a.m., 8/4/12

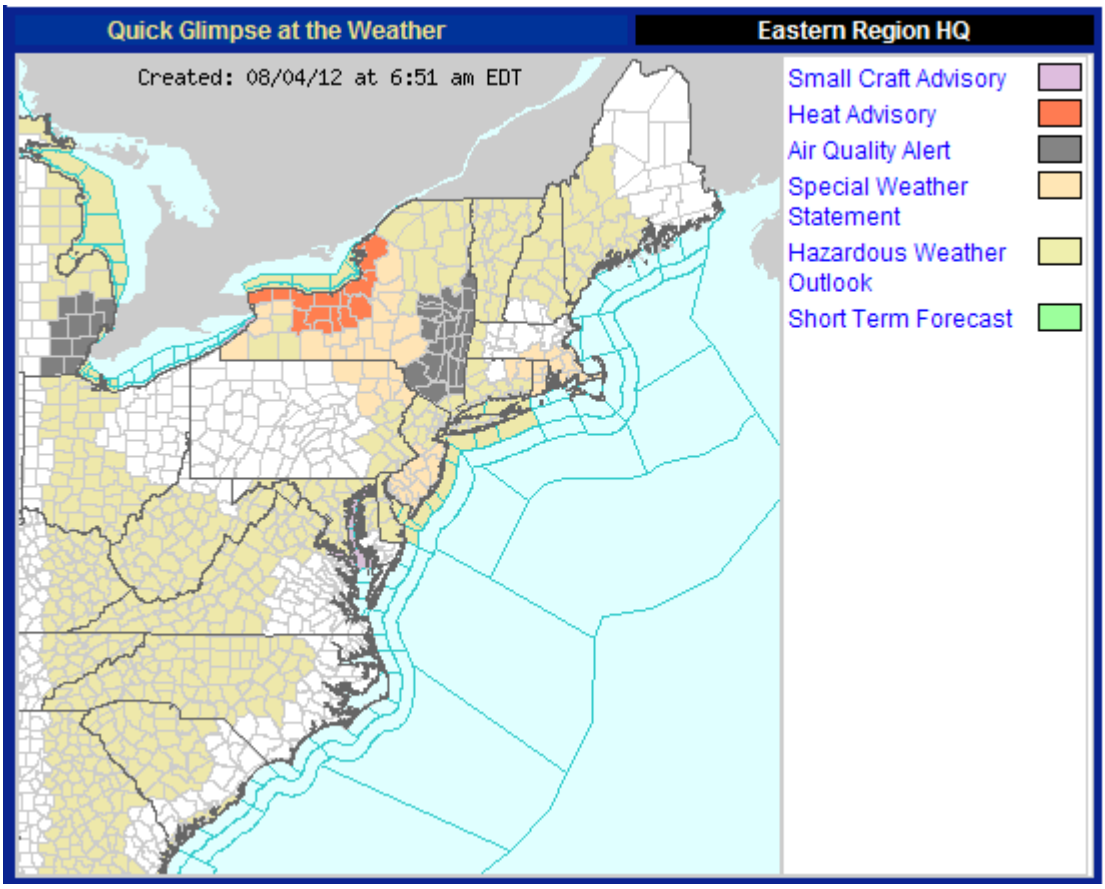
The clearing sky has given way to low forming clouds and patchy fog this morning. Expect the low-level clouds to spread out towards sunrise and then dissipate by mid morning. Today will feature increasing clouds through the afternoon hours with scattered showers and thunderstorms possible by evening. High temperatures will range from the upper 80s across the north to near 90 in the southeast.

Thunderstorm chances will continue through the first half of the evening before ending not to long after sunset. Lows tonight will be in the upper 60s in the northwest to the low 70s in the southeast. A more significant chance of thunderstorms is possible on Sunday as a storm system moves through the Ohio Valley and makes its way across central Pennsylvania tomorrow afternoon and evening.

PEMA will continue to monitor future National Weather Service forecasts and the threat of potentially severe weather to cross the Commonwealth on Sunday, 8/5/12. State agencies have been briefed and are ready to provide assistance to the affected counties as needed.

WATCHES AND WARNINGS:

None



NOAA / SPACE WEATHER PREDICTION CENTER:

3-day Solar-Geo-Physical Forecast, 10:00 p.m., 8/3/12:

Solar Activity Forecast: Solar activity is expected to continue at low levels with a slight chance for an isolated M-class flare.

Geophysical Activity Forecast: Geomagnetic activity is expected to be quiet for the next three days (August 04-06).
