None

CONTIGUOUS STATE EVENTS OF POTENTIAL INTEREST TO PENNSYLVANIA:

Delaware: No significant events at this time.
Maryland: No significant events at this time.
New Jersey: No significant events at this time.
New York: No significant events at this time.
Ohio: No significant events at this time.
West Virginia: No significant events at this time.

WEATHER:

24-hour Projected Weather Statewide:

National Weather Service, 5:37 a.m., 8/13/12

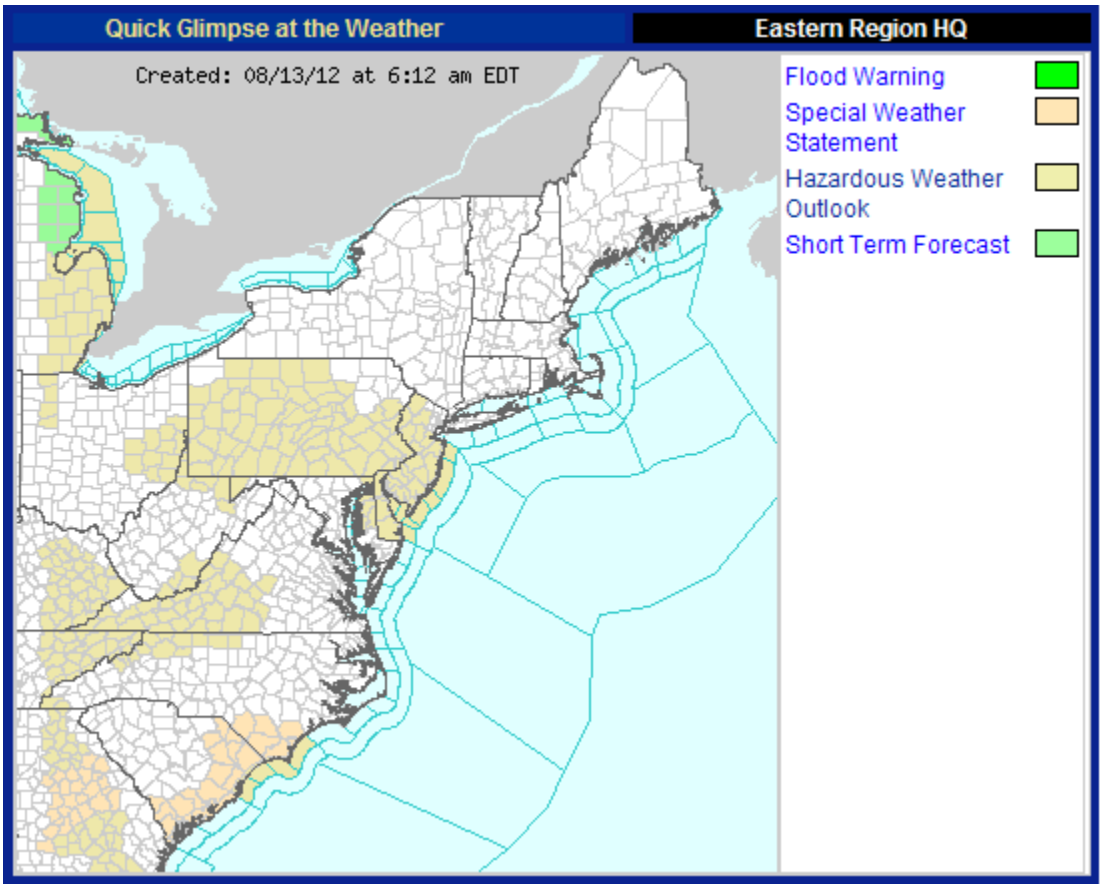
High pressure over the Commonwealth today will provide fair weather with temperature close to seasonal normal. Clouds streaming eastward from the upper Ohio Valley will keep the skies from being totally sunny today.

Temperatures will return nearer to normal today ahead of a cold front. The front will approach from the west reaching the west Tuesday morning and push west to east across the state. The front will likely stall briefly over eastern Pennsylvania late Tuesday night and Wednesday.

Showers and thunderstorms may begin before sunrise Tuesday morning and become widespread over the state during the day. Some of the storms could produce gusty winds and hail. The storms will last until the cold front pushes through clearing the west in the late afternoon or evening. But they will likely linger all night and into Wednesday in the eastern third of the state. Drier and cooler air will then settle in for a couple of days.

WATCHES AND WARNINGS:

There are no active watches, warnings or advisories.



NOAA / SPACE WEATHER PREDICTION CENTER:

3-day Solar-Geo-Physical Forecast, 10:00 p.m., 8/12/12:

Solar Activity Forecast: Solar activity is expected to be low with a slight chance for an M-class event.

Geophysical Activity Forecast: The geomagnetic field is expected to be quiet to unsettled, with a slight chance for an active period, for days 1 and 2 (13-14 August) before becoming mostly quiet on day 3 (15 August). The increased activity on the first two days is expected from the influence of a weak high speed stream.
