Maryland: No significant events at this time.
New Jersey: No significant events at this time.
New York: No significant events at this time.
Ohio: No significant events at this time.
West Virginia: No significant events at this time.

WEATHER:

24-hour Projected Weather Statewide:

National Weather Service, 5:11 a.m., 9/6/12

Mid to upper level clouds out ahead of an incoming trough will be moving through the central Commonwealth through the morning hours. Expect only isolated showers from early to mid morning. The clouds will reduce any chances for fog this morning, though patchy valley fog remains possible in the southeastern portion of the state where skies have remained clear. Any fog or low clouds that do develop will disperse a few hours after sunrise.

Expect partly to mostly sunny skies through the first half of the day as a weak cold front approaches from the Ohio Valley. This front should spark scattered late day showers and thunderstorms with partly cloudy skies towards the end of the day.

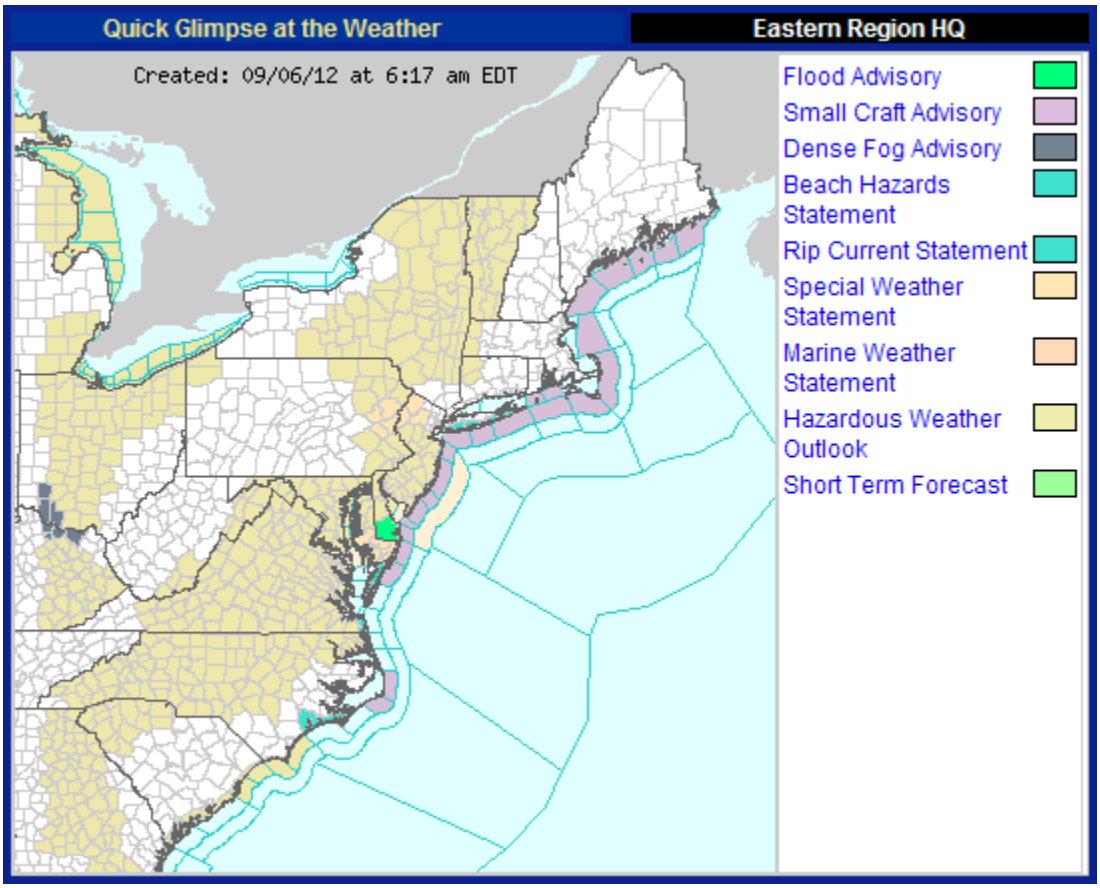
It will be warm with high temperatures ranging from the low 80s across the northern mountains to around 90 degrees across the valleys of south-central and southeastern Pennsylvania.

Lows tonight will range from the upper 50s along the northern border to the mid to upper 60s along the Mason Dixon Line.

The front will cross Pennsylvania tonight into Friday with only a slight chance of showers along the southeastern corner of Pennsylvania Friday afternoon. Friday will feature partly to mostly sunny skies with an outside chance of an afternoon shower or thunderstorm. Temperatures will remain above normal with highs in the 80s statewide.

WATCHES AND WARNINGS:

There are no active watches or warnings.



NOAA / SPACE WEATHER PREDICTION CENTER:

3-day Solar-Geo-Physical Forecast, 10:00 p.m., 9/5/12:

Solar Activity Forecast: Solar activity is expected to be low through the period (06 - 08 September) with a chance for an isolated M-class flare during days 1 -2.

Geophysical Activity Forecast: Geomagnetic field activity is expected to be at quiet to unsettled levels through the period (06 - 08 September) with a chance for active levels on day 1 due to possible weak coronal hole high-speed stream effects.
