**Maryland:** No significant events at this time.
**New Jersey:** No significant events at this time.
**New York:** No significant events at this time.
**Ohio:** No significant events at this time.
**West Virginia:** No significant events at this time.

**WEATHER:**

**24-hour Projected Weather Statewide:**

**National Weather Service, 4:40 a.m., 9/15/12**

A cold front moved across Pennsylvania overnight hours. A few showers occurred with the front. Mainly clear skies were across the Keystone State early this morning. Temperatures ranged from 40s across the northwestern mountains 50s across much of the area to the lower to mid 60s across the southeast.

High pressure from the northern plains will build across the western part of Pennsylvania late today bringing plenty of sunshine to the area. Highs will range from the mid to upper 60s across the mountains to the lower to mid 70s across the southeast.

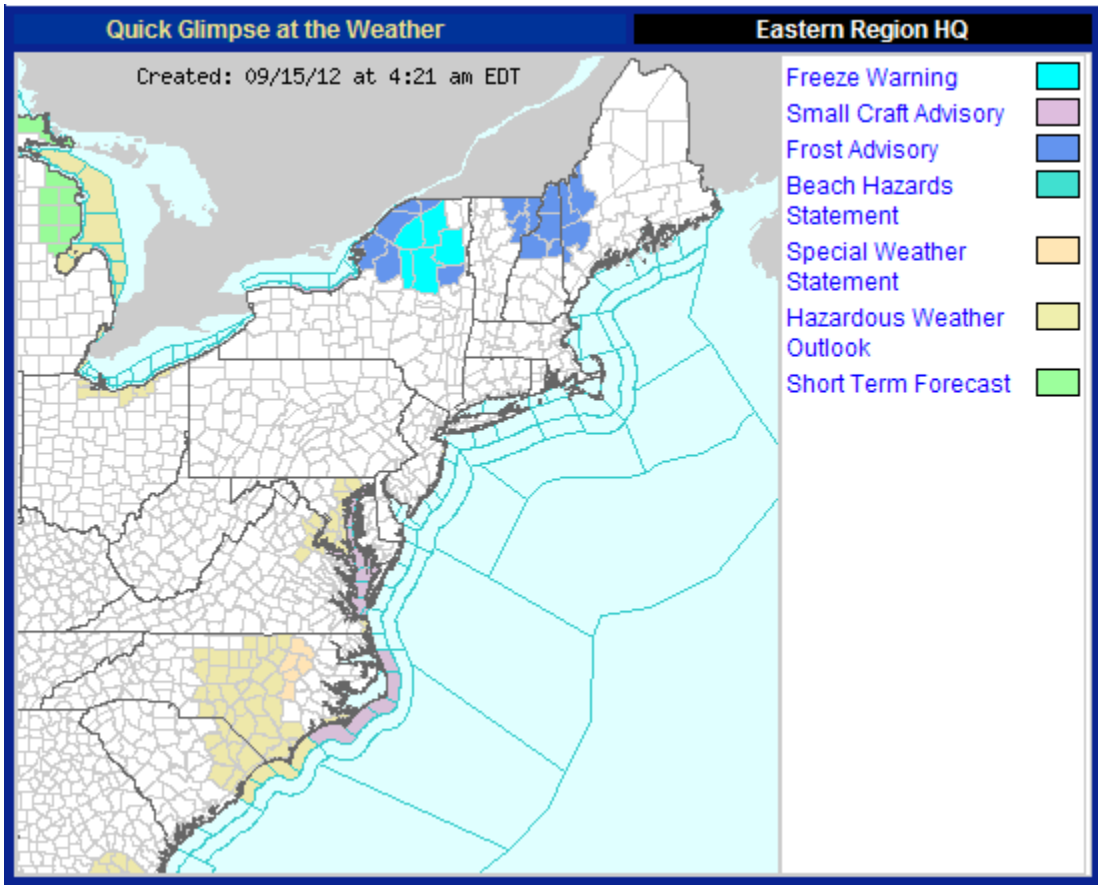
With clear skies and light winds across the region tonight temperatures will fall into the mid to upper 30s across the northern mountains with pockets of frost. Most areas will see lows in the 40s.

High pressure will give the keystone state another sunny day on Sunday with temperatures a few degrees warmer than today.

Clouds will be on the increase on Monday with a chance of showers as high pressure moves off the east coast. Widespread rain is expected Monday night into Tuesday night as a southern flow of moist air is advected northward ahead of a strong cold front.

**WATCHES AND WARNINGS:**

There are no active watches or warnings.



**NOAA / SPACE WEATHER PREDICTION CENTER:**

**3-day Solar-Geo-Physical Forecast, 10:00 p.m., 9/14/12:**

**Solar Activity Forecast:** Solar activity is expected to be very low through the period (15 - 17 September) with a chance for a C-class flare.

**Geophysical Activity Forecast:** Geomagnetic field activity is expected to increase to quiet to unsettled levels on day 1 (15 September) due to a coronal hole high-speed stream. A further increase to unsettled levels is expected on day 2 (16 September) with a chance for active levels due to the arrival of the CME associated with the filament disappearance on 13 September. Field activity is expected to decrease to quiet to unsettled levels on day 3 (17 September).
