WEATHER:

24-hour Projected Weather Statewide:

National Weather Service, 4:28 a.m., 10/1/12

High pressure will pay a brief visit today before an approaching frontal system brings some rain for later tonight and Tuesday.

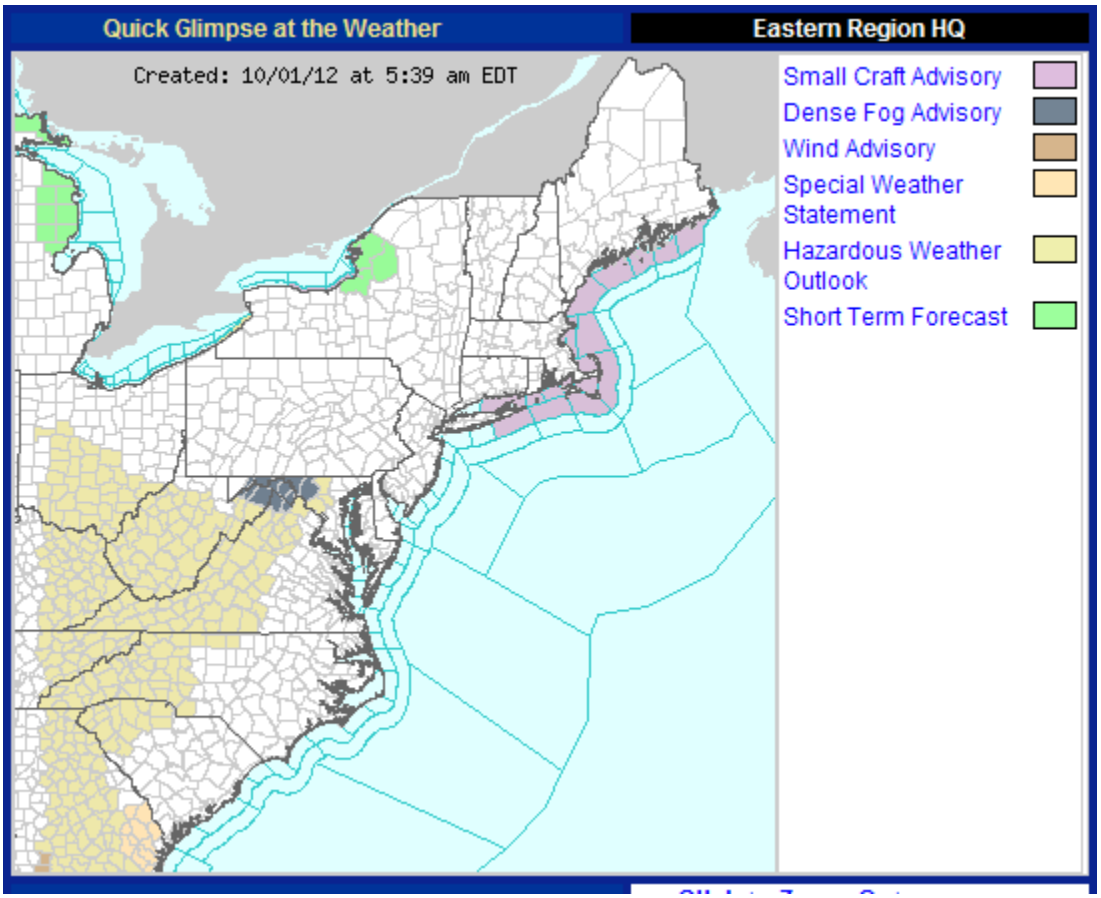
High clouds will gradually increase today but it will remain dry with highs ranging from the mid 60s over the northwest to lower 70s over the southeast.

It will remain mild overnight as clouds thicken and showers gradually overspread the region. Lows will be in the 50s.

Tuesday will be a showery day with a few thunderstorms also possible. Highs will be in the upper 60s to lower 70s.

WATCHES AND WARNINGS:

None



NOAA / SPACE WEATHER PREDICTION CENTER:

3-day Solar-Geo-Physical Forecast, 10:00 p.m., 9/30/12:

Solar Activity Forecast: Solar activity is expected to be at low levels with a slight chance for continued M-class activity for the next two days (01 - 02 October). A return to low levels is expected on day three (03 October), as the active region cluster, located in the northwest quadrant, rotates around the west limb.

Geophysical Activity Forecast: The geomagnetic field is expected to be at quiet to active levels with minor storm periods possible on day one (01 October), as effects of today's CME continue. Quiet to unsettled levels are expected on day two (02 October) as CME effects wane. A return to predominantly quiet levels is expected on day three (03 October).
