Maryland: No significant events at this time.
New Jersey: No significant events at this time.
New York: No significant events at this time.
Ohio: No significant events at this time.
West Virginia: No significant events at this time.

WEATHER:

24-hour Projected Weather Statewide:

National Weather Service, 6:10 a.m., 10/3/12

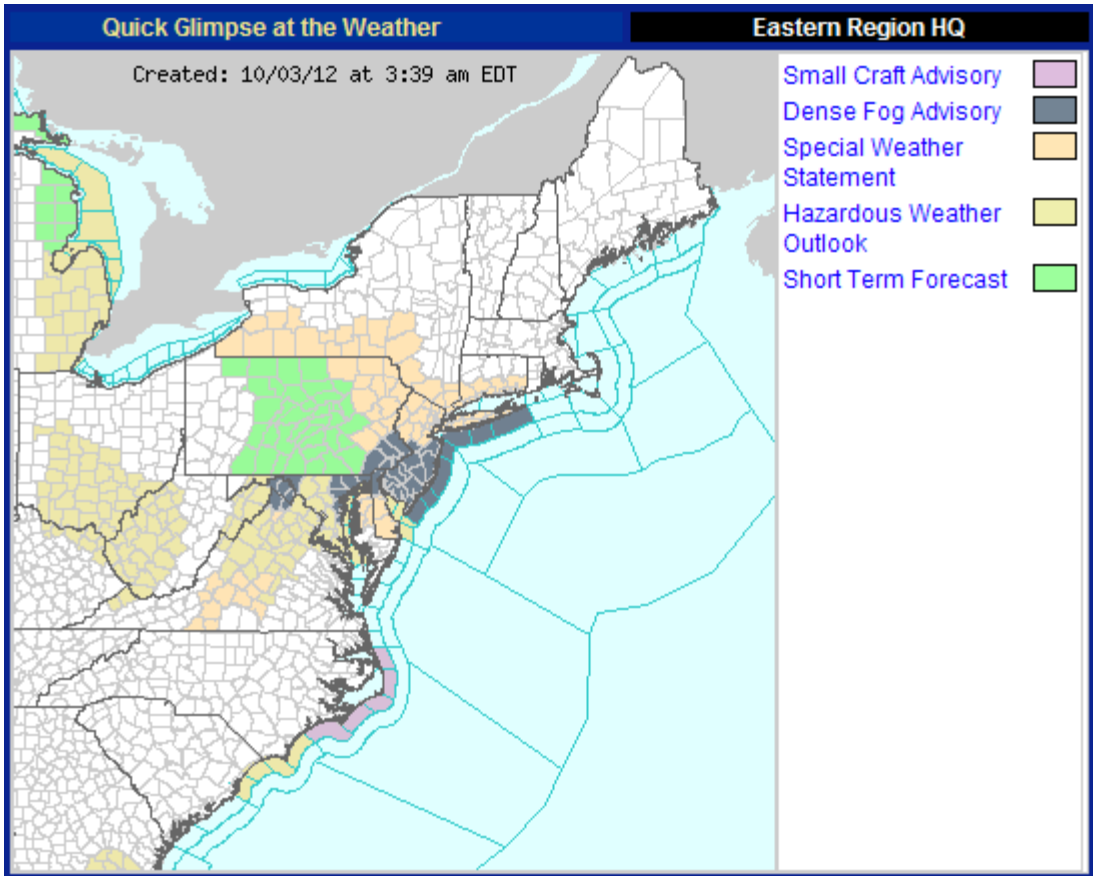
A front will move to the east across much of the state this morning. Areas of fog will burn away and leave a very warm day for early October. Scattered showers will linger in the east through much of the day and a few afternoon showers may pop up in the central and northeastern mountains. But most of the state will have no rain. Temperatures today will be about 10 degrees warmer than normal reaching the 70s state-wide and even get above 80 degrees in a few spots in the southeastern Piedmont.

The old front will stall out before reaching the Delaware River. A wave of low pressure will then ride northward along the old front tonight. Expect scattered showers in the eastern half of the state later tonight and for the first half of the day on Thursday.

The abnormally warm air will stay in place. Lows tonight will be near 50 degrees in the north and west but stay in the mid 60s around Philadelphia. High pressure moving up from the south will keep it warm into Friday. Highs on Thursday will again be between 70 and 80 degrees. A cold front will approach from the northwest on Friday and will bring clouds and the next chance of showers to the northwest on Friday.

WATCHES AND WARNINGS:

None



NOAA / SPACE WEATHER PREDICTION CENTER:

3-day Solar-Geo-Physical Forecast, 10:00 p.m., 10/1/12:
