Maryland: No significant events at this time.
New Jersey: No significant events at this time.
New York: No significant events at this time.
Ohio: No significant events at this time.
West Virginia: No significant events at this time.

WEATHER:

24-hour Projected Weather Statewide:

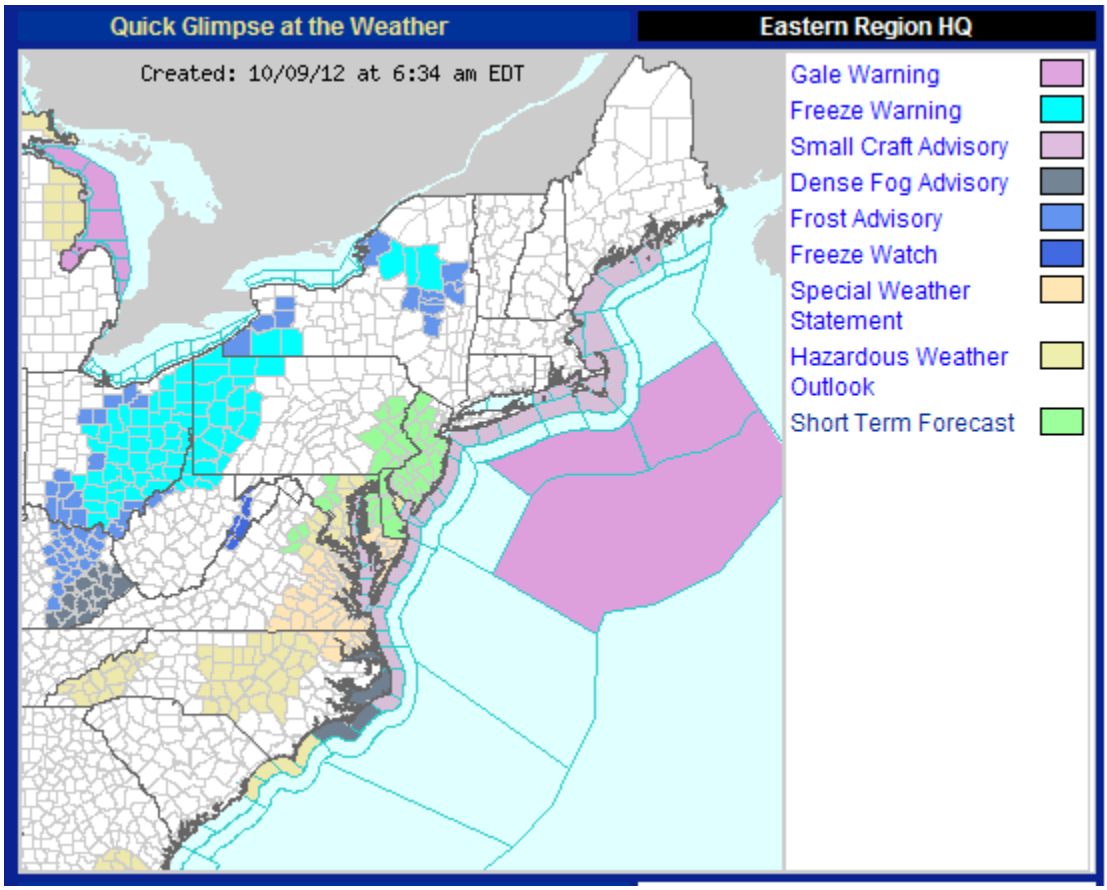
National Weather Service, 5:32 a.m., 10/9/12

A weak low-pressure system passing off the East Coast will produce mainly cloudy skies across eastern Pennsylvania today along with the chance of a few morning showers across the southeast counties. Across western Pennsylvania skies will be mostly sunny. High temperatures will be in the upper 50s to low 60s across the Commonwealth. Lows tonight will range from the upper 30s across the Allegheny Plateau to the low 50s in Philadelphia.

A cold front approaching from the Great Lakes will sweep through the state on Wednesday accompanied by a few rain showers mainly across the northwest mountains. A gusty west wind will follow the passage of the front Wednesday afternoon. High temperatures will range from the low 50s across the Allegheny Mountains to the upper 60s across the Southeast Piedmont.

WATCHES AND WARNINGS:

None



NOAA / SPACE WEATHER PREDICTION CENTER:

3-day Solar-Geo-Physical Forecast, 10:00 p.m., 10/8/12:

Solar Activity Forecast: Solar activity is expected to be very low to low on day 1 (9 October). Activity is forecast to increase to low on day 2 (10 October) and low with the a chance for moderate levels on day 3 (11 October) as the new region emerges around the east limb.

Geophysical Activity Forecast: The geomagnetic field is forecast to be at minor storm levels (G1) on day 1 (09 October) as CME effects continue. Days 2 and 3 (10-11 October) are forecast to be quiet to unsettled with possible isolated active levels persisting, due to a coronal hole that is expected to move into a potentially geoeffective position.
