CONTIGUOUS STATE EVENTS OF POTENTIAL INTEREST TO PENNSYLVANIA:

Delaware: No significant events at this time.
Maryland: No significant events at this time.
New Jersey: No significant events at this time.
New York: No significant events at this time.
Ohio: No significant events at this time.
West Virginia: No significant events at this time.

WEATHER:

24-hour Projected Weather Statewide:

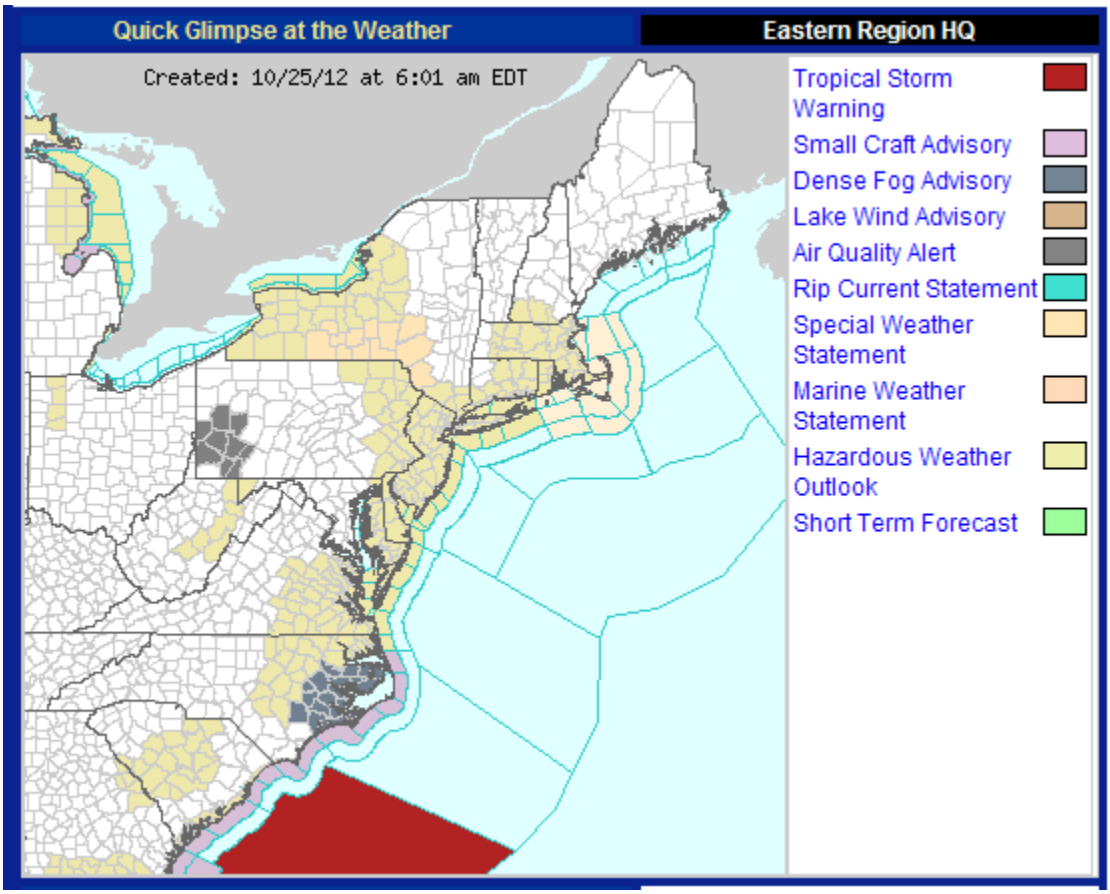
National Weather Service, 5:27 a.m., 10/25/12

A ridge of high pressure along the East Coast will provide Pennsylvania with another warm day. The western half of the state will see plenty of sunshine. However, clouds associated with a moist flow off the Atlantic Ocean will keep eastern Pennsylvania mostly cloudy. Highs today will range from near 80 along the Ohio Border to the upper 60s across the eastern portion of the state.

A persistent, moist easterly flow off the Atlantic Ocean will cause low clouds and areas of drizzle to develop across the eastern half of the state tonight while areas west of the Appalachians will stay mostly clear. Lows tonight will be in the 50s. A dying cold front will push into northwest Pennsylvania on Friday afternoon bringing increasing clouds and the chance of showers to that part of the state. Across the southeast early low clouds and drizzle will give way to partial clearing by afternoon. Highs Friday will range from the mid 70s around Pittsburgh to the mid 60s across the central mountains.

WATCHES AND WARNINGS:

None



NOAA / SPACE WEATHER PREDICTION CENTER:

3-day Solar-Geo-Physical Forecast, 10:00 p.m., 10/24/12:

Solar Activity Forecast: Solar activity is expected to be moderate to high with occasional M-class events, and a slight chance for an isolated X-class event for the next three days (25 - 27 Oct) with Region 1598 the most likely source.

Geophysical Activity Forecast: The geomagnetic field is expected to be quiet for the next three days (25 - 27 Oct).
