Commonwealth of Pennsylvania

Death Certificate Registration Manual

INTRODUCTION

Purpose

The death certificate is the legal record of the fact of death of an individual. As a permanent legal record, the death certificate is extremely important to the decedent's family. It is also needed for a variety of medical and health-related research efforts. The death certificate provides important information about the decedent, such as age, sex, race, date of death, his or her parents, and, if married, the name of the spouse; information on circumstances and cause of death; and final disposition. This information is used in the application for insurance benefits, settlement of pension claims, and transfer of title of real and personal property. The certificate is considered to be prima facie evidence of the fact of death. It can therefore be introduced in court as evidence when a question about the death arises.

Statistical data from death certificates are used to identify public health problems and measure the results of programs established to alleviate these problems. This data is a necessary foundation on which to base effective public health programs. Health departments could not perform their duties without such data. Mortality statistics are of considerable value to individual physicians and to medical science because they can be used to identify disease etiology and evaluate diagnostic techniques. Demographers use mortality statistics in combination with natality statistics to estimate and project population sizes, which are important in forecasting and program planning.

Specific Responsibilities

Funeral Director

Pennsylvania regulations allow for someone other than a funeral director to be in charge of disposition of the body; all funeral director references in this manual also apply to other person in charge of interment.

Funeral directors are responsible for getting the death certificate completed. In general, their duties are to:

- Complete, or have completed, all items on the death certificate.
- Obtain the cause-of-death information and certification statement from the attending physician, certified registered nurse practitioner, medical examiner or coroner.
- Secure all necessary signatures on the certificate and proofread the certificate for completeness and accuracy before filing with the Local Registrar.

- Filing the Certificate of Death within ninety-six (96) business hours after the death or within ninety-six (96) business hours of the finding of a dead body.
- Notify the medical examiner or coroner of any death that is believed to have been due to an accident, suicide or homicide or to have occurred without medical attendance, unless this has already been done by the pronouncing or certifying physician or the police.
- If unable to obtain the certifying physician's or certified registered nurse practitioner's signature, a temporary death certificate may be filed with the local registrar. This allows the local registrar to release a disposition permit so funeral arrangements can proceed. Cremation is permitted on a temporary certificate with proper authorization. The authorization does not necessarily make it "final" due to pending manner or if it's a natural death still under investigation.
- Obtain and use all necessary permits and other forms associated with the death registration program.
- Cooperate with state or local registrars concerning queries on certificate entries.
- Cooperate with pathologists in cases involving postmortem examinations.
- Be thoroughly familiar with all laws, rules and regulations governing the vital records process.
- Call on the Division of Vital Records for advice and assistance when necessary at 1-800-842-5040 or 724-656-3100.

Facility (Hospital, Nursing Hospital or Hospice)

The responsibility of a facility where a death was pronounced is to complete the following items only:

- Enter the name of the decedent and any aliases used in the **left margin only** (do not complete Item 1). Item 1 is to be completed by Funeral Director, Medical Examiner or Coroner.
- The Facility shall leave items 1 - 22b for the Funeral Director to Complete.
- The death certificate states that items 23a-23d must be completed by person who pronounces or certifies death. However, this is a typo and should read items 23a-25.
- Items 23a through 25 must be completed by the person who pronounces (may be a Registered Nurse, RN) or certifies death (must be a Licensed Physician, Medical Examiner or Coroner). A Registered Nurse may only pronounce the death, they cannot certify.

- Items 23a – 39c should be check for completeness prior to distribution to the Funeral Director. Resolve any incomplete items before distribution to the Funeral Director.
- **It is the responsibility of the facility to proofread the document after certifier completion to assure completeness, particularly sections 39a-39c. If any of these areas are incomplete, please address with the physician prior to distribution to the funeral director.**

Physician/Certified Registered Nurse Practitioner

The physician's or certified registered nurse practitioner's principal responsibility in death registration is to complete the medical part of the death certificate, items 23a through 39c. The physician or certified registered nurse practitioner is to:

- Enter or verify the date of death (month, day, and year).
- Enter or verify the date pronounced dead (month, day, and year).
- Enter or verify the time of death.
- Enter or verify whether the case was referred to the medical examiner or coroner.
- Complete the cause of death section (attending physician is to complete this section). Please refrain from use of abbreviations whenever possible.
- Complete the certifier section. Please refrain from using a stamp to complete item 39b.
- Deliver the signed death certificate to the funeral director promptly so that the funeral director can file it with the local registrar within 96 hours.
- Be familiar with state and local regulations on medical certifications for deaths without medical attendance or involving external causes that may require the physician to report the case to a medical examiner or coroner.
- Assist the state or local registrar by answering inquiries promptly.
- Deliver a replacement certificate to the Vital Records Office when autopsy findings or further investigation reveals the cause of death to be different from what was originally reported.

Medical Examiner or Coroner

The medical examiner or coroner's principal responsibility in death registration is to complete the medical part of the death certificate. Before delivering the death certificate

to the funeral director, he or she may add some personal items for proper identification, such as name, residence, race and sex. Under certain circumstances and in some jurisdictions, he or she may provide all the information, medical and personal, required on the certificate.

The funeral director, or other person in charge of interment, will otherwise complete those parts of the death certificate that call for personal information about the decedent. He or she is also responsible for filing the certificate with the registrar.

In general, the duties of the medical examiner or coroner are to:

- Enter or verify the date of death (month, day, and year).
- Enter or verify the time of death.
- Complete the cause-of-death section. If suicide, accident or homicide, be certain to also complete items #32 - #38.
- Complete the certifier section.
- Deliver the signed certificate to the funeral director promptly so that the funeral director can file it with the local registrar within 96 hours.
- Cooperate with the state and local registrar by responding promptly to any queries concerning any entries on the death certificate.
- Deliver a replacement certificate to the Vital Records Office when autopsy findings or further investigation reveal the cause of death to be different from that originally reported.

When the cause of death cannot be determined within the statutory time limit, a death certificate should be filed with the notation that the report of the cause of death is “pending investigation.” A permit to authorize disposal or removal of the body can then be obtained.

If there are other reasons for a delay in completing the medical portion of the certificate, the registrar should be given written notice of the reason of the delay by the person causing the delay. When the circumstances of death (accident, suicide or homicide) cannot be determined within the statutory time limit, the cause-of-death section should be completed and the manner of death should be shown as “pending investigation.”

As soon as the cause of death or manner of death is determined, a FINAL certificate should be filed with the registrar, or the current death certificate should be corrected or amended, according to state and local regulations regarding this procedure.

When a body has been found after a long period of time, the date and time of death should be estimated as accurately as possible. If an estimate is made, the information

should be entered as “APPROX-date” and/or “APPROX-time.” If an estimate cannot be made, the information should be entered as “DATE FOUND-date” and/or “TIME FOUND-time.”

Please proofread the document for completeness and accuracy before release to the Funeral Director or Local Registrar.

Authorization for Final Disposition of Dead Body or Fetus

The funeral director must secure explicit authorization before he or she may remove, bury, cremate, entomb, disinter, reinter or otherwise dispose of a dead body.

Form of Authorization (Disposition/Transit Permit)

The authorization accompanies the dead body to its place of final disposition, where it is presented to the person in charge of the place of disposition. He or she is then required to return the authorization to the registration official who issued the authorization. The funeral director should be familiar with the Commonwealth’s requirements and inform the person in charge of the place of disposition where to return the authorization.
